Bugfix Added fix for hellfire
hale sometimes becoming
an error

ok this is actually the last one this
time unless another VSH map gets
added for Christmas or the badass
mobster VIP mode gets added

Stuff from last update: Thanks so
much to the ppl that still use this
preloader! It's been a long ride and
this mod is basically on the final
version.

I recommend using [Goopswagger's
QuickPrecache](#) instead of this mod if

you can get it working. It doesn't take a thousand years to load, works with even more models, and actually lets you play singleplayer without crashing. There's a bug with modded cosmetics sometimes turning black but it's worth it

I'll still provide some support for this mod but I'm not planning on making any big updates anytime soon (kinda like TF2!)

Addition Improvement Removal Bugfix

Loading...

The new Casual preloading method requires models to actually be loaded in-game. This modernized preloader now fixes most of the caveats from the older preloaders using VScript.

Features:

- Preloads most new custom models, animations, and even ragdoll mods
- Main menu music after preloading (thanks [treacherousfiend!](#))
- Works after Scream Fortress XV broke mods in Casual
- ~~Overrides .BSP-packed models, custom Hale models and map props can now be modded (sorry this got~~
